

SofiaCMS

friendly content management

What is Content Management?

With a Content Management System (CMS) such as SofiaCMS you can easily make changes to the content of your website or intranet without any technical knowledge or experience. You can change text, pictures, documents or any other mission critical information necessary to run your business without having to depend on an external agency. The benefit of such a system is a high degree of site flexibility coupled with ongoing cost savings.

Content Management Simplified

SofiaCMS has been developed through extensive testing on a diverse selection of systems with a clear vision in mind: create an intuitive CMS interface and present it in a highly user friendly package.

With SofiaCMS, powerful functionality sits comfortably alongside total ease of use, which means that staff at all experience and competence levels can quickly and easily make updates. Additionally, your employees will not need expensive training courses as a short walk-through is all that is required to get started. With SofiaCMS, updating your website is fun again!

The benefits

- Web based, manage your business 24/7 anywhere at anytime;
- User-friendly and intuitive;
- No dependency on external agencies or intensive training courses;
- Modular system, expandable at your pace;
- Fast and reliable
- Secure environment according to the latest programming standards

Web based

SofiaCMS is completely web based. This means that you can manage your site 24/7 anywhere and at anytime in the world. In turn this creates an enormous flexibility on your part as you do not depend on a time, location, or indeed an external agency. SofiaCMS is compatible with all popular web browsers and runs on PC as well as an Apple Macintosh.

SofiaCMS Modules

SofiaCMS contains a starter kit and the option for additional modules. With the starters kit you can manage a fairly basic website and for the most common functionalities there are also a selection of standard modules available. Custom made modules can be developed to your specific needs and changing business requirements. SofiaCMS is also compatible with external modules.

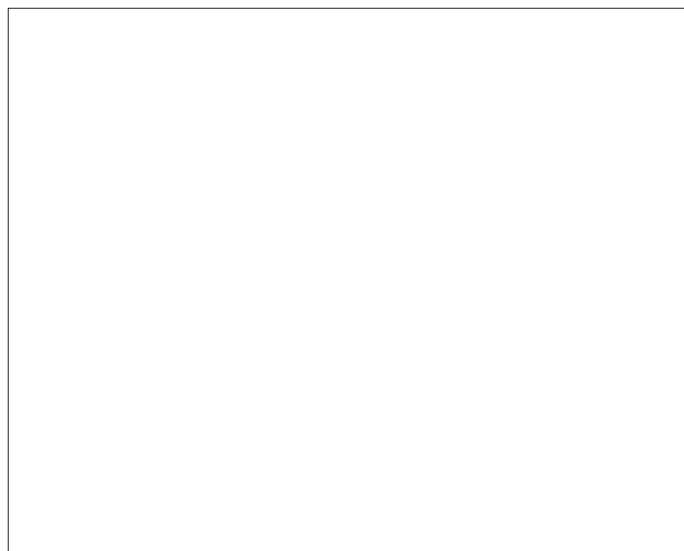

Manageable Costs

Because SofiaCMS is a modular system, you can control the costs of your website. The SofiaCMS starter kit will be implemented for a one-time license fee plus installation costs. The standard modules can be installed for fixed costs plus possible additional costs when modified to your specific needs. With SofiaCMS, the costs for managing your website's content are manageable.

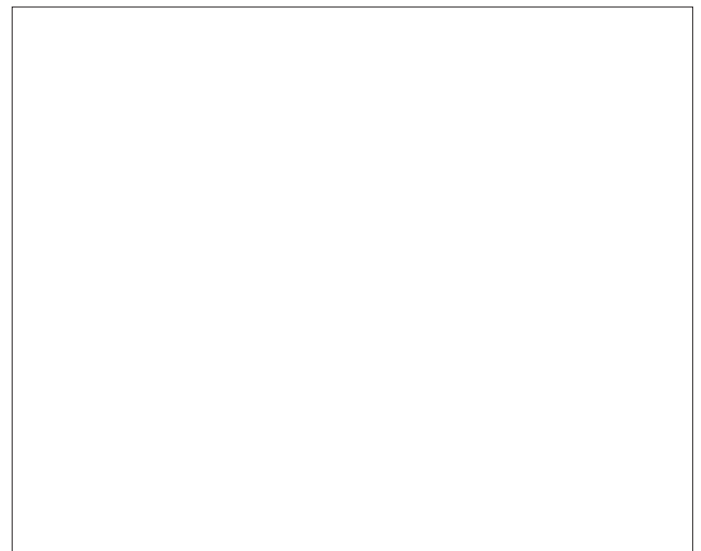

Tailor made

SofiaCMS can be expanded with modules that have special functionalities. These custom tailored modules will be developed to your specific needs. If you are looking for special or particular functionalities, please let us know.
